EDUCATION

McMaster University
Bachelor of Engineering: Engineering Physics

Hamilton, Ontario
Expected 2029

WORK EXPERIENCE

Machine Learning Intern
Personalized Prescribing

Toronto, Ontario
Incoming Fall 2026

- Building ML models to predict which medications will be effective based on **metabolic enzyme** and **brain receptor gene interactions**.

Software Engineering Intern
HermesAI

Toronto, Ontario
May 2026 - Present

- Built **React** interfaces for document upload and AI-powered case extraction, supporting legal files exceeding **1,000 pages**.
- Developed scalable legal document dashboards, reducing manual processing time by **50% for Canadian law firms**.
- Reduced document processing latency by **30%** by offloading file processing to asynchronous **Node.js**.

Founding Engineer
Magnified Systems

Toronto, Ontario
February 2026 - Present

- Built a motorcycle helmet-mounted **IMU (MPU6050)** device to detect and quantify impact severity in real time.
- Trained a **PyTorch** regression model on **1,000+ impact samples**, predicting severity within **±1%**.
- Developed a **C++** severity-score algorithm mapping linear and angular acceleration to a 1-100 impact scale.
- Designed the 3D modelled device enclosure in **SolidWorks**, producing a **PETG** fabricated model.

PERSONAL PROJECTS

[🔗](#) **Autonomous Self-Driving Vehicle with CARLA** [CARLA, YOLOv11, PyTorch, OpenCV]

- Developed an end-to-end autonomous driving pipeline in the **CARLA** simulator integrating **YOLO-based object detection** and **vehicle control**, achieving a real-time simulation at **~20-30 FPS**.
- Wrote to a dataset with **5+ features** (steer, brake, speed, acceleration, throttle), generating **25k+** sample datasets to train a **PyTorch** model.
- Used **CrossEntropyLoss**, achieving **~88.5%** prediction directional accuracy for precise automation navigation.

[🔗](#) **Breast Cancer Cell Detection** [PyTorch, YOLOv11, Grad-Cam, CNNs]

- Fine-tuned **YOLOv11** on **5,400+** annotated mammography images to localize breast cancer regions with bounding box detection across **benign** and **malignant** classes.
- Built a custom **3-layer PyTorch** CNN classifier from scratch achieving **95.31%** confidence on malignant tumor classifications using **CrossEntropyLoss** and **Adam optimization**.
- Implemented **Grad-CAM** explainability on the CNN's final convolutional layer, generating **spatial heatmaps** that visually highlight the tumor regions driving each prediction.

[🔗](#) **AI Smart Computer w/ Hand Gesture Control** [MediaPipe, PyAutoGUI, OpenCV]

- Implemented **6+ gesture mappings** with 21-point hand tracking, enabling click, cursor, mute, and volume control via distance thresholds.
- Reduced unintended inputs by **~60%** using gesture filtering and cooldown logic, achieving **<100 ms** latency.

Technical Skills

Programming Skills: Python, C++, Javascript, CSS, HTML, MATLAB

ML and Computer Vision: PyTorch, TensorFlow, Scikit-learn, OpenCV, YOLOv11, LangChain, Mediapipe, OpenAI, Numpy, Pandas

Robotics and Simulation: RVIZ, Gazebo, SLAM, Nvidia Isaac Sim

3D Design: AutoCAD, Fusion360, Inventor, SolidWorks

Web Development: Node.js, React.js

Electronics and Microcontrollers: Arduino, Raspberry Pi, ESP32

Tools & OS: Docker, Git, Linux, Ubuntu
